

2TN Nozzle

#### **ALWAYS BE SURE**

- The Nozzle size is recommended for the plate.
- Operating pressures are between
  40 and 65 PSI (2.8 to 4.5 BAR)
- Proper assembly is essential to product satisfaction.

# R2000WF/LP DISASSEMBLY/REPAIR INSTRUCTIONS

#### **GENERAL DISASSEMBLY**

- 1. **REMOVE THE SPRINKLER** from the ACME thread of the quick change adapter.
- SEPARATE THE CAP FROM THE BODY by squeezing the release points (the words SQUEEZE) while turning counter-clockwise. For easy removal, use the #10689 Cap Removal Tool. Position the tool (as shown on the right) to apply pressure to the words SQUEEZE.
- Use the #12260 2TN Nozzle Removal Tool to REMOVE THE 2TN NOZZLE from the body. Place the tool at the top of the R2000WF body and press down. The nozzle should easily pop out.

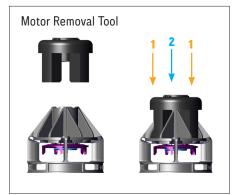

WARNING: Always use the #12260 tool to remove a 2TN nozzle from a R2000WF Rotator. Never use a stick, rod, or any other object to push on the outlet of the 2TN nozzle to remove. This can easily damage the plate bearing surface and cause rotation failure.

- REMOVE THE PLATE by placing your fingers in the open space in the cap (between the washer and plate). Pull towards you until the plate pops up away from the cap.
- REMOVE THE MOTOR from the cap by fitting the Motor Removal Tool #12215 onto the top of the cap.

(1) Press on the outer ring of the motor removal tool so it fits tightly against the cap. (2) Press on the inner circle of the tool so the motor disengages from the cap. Gently push the motor from the top to completely remove it from the cap assembly.

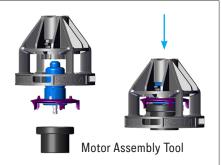

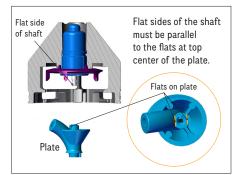

## **GENERAL ASSEMBLY**

- SELECT THE NEW PARTS nozzle, plate and/or motor that will be used in the assembly. Always be sure the nozzle size is recommended for the plate and the motor. See graph on right.
- 2. While holding the cap in one hand, INSTALL THE MOTOR by first setting the diffuser in place (small teeth against the ridges in the cap) and topping it off with the washer. Direct the motor into the hole of the cap assembly. Align the hole of the Motor Assembly Tool (the disc that ships with part #12215) on the shaft of the motor and snap motor into place.
- 3. Next, ASSEMBLE THE PLATE TO THE CAP ASSEMBLY. Place the cap assembly in one hand and the WF Plate in the other. Orient the two components so the flats of the motor shaft and plate are parallel as shown below. Gently push the plate onto the shaft. The plate is correctly installed once you have felt two distinct "clicks" as you push the plate on. Do not continue pushing after you have felt the plate snap into place. Damage to the plate and/or other parts may occur, resulting in unsatisfactory sprinkler operation.
- CONNECT THE CAP/PLATE ASSEMBLY TO THE BODY by holding the body in one hand and fastening the cap/assembly with a clockwise turn of the other hand.
- 3. PLACE A 2TN NOZZLE INTO THE BASE OF THE WF BODY with the small end of the nozzle pointed towards the cap.
- 4. PLACE A QUICK CHANGE ADAPTER INTO THE BASE OF THE BASE OF THE BODY and turn clock-wise. Confirm that there is a o-ring in place. Assembly is now complete.
