

► **Large Capacity Chemigation Systems**
For bigger jobs and heavier products in suspension.

Used for: Large-scale application of highly viscous – even slurried – materials through irrigation systems, including gypsum, potash, calcium compounds and other organic soil amendments.

Tank Capacities: 300, 400, 500 and 600-gallon tanks available. All are engineered to fully mix chemicals and completely drain.

- Easily fitted to most center pivot, linear sprinkler, drip and solid set irrigation systems
- Keeps even the heaviest materials in suspension for uniform application
- Powerful pump and agitation system for high performance and long life
- Agitation is standard on all sizes
- Available in three phase, single phase and 12-volt DC and most international electrical configurations

400-Gallon Unit

► **Chemigation Injection Systems**
Precise application of high crops inputs as you irrigate.

Global technology

Since 1983, we've distributed metering pumps to every corner of the globe utilizing irrigation to raise sustainable crops. The engineered reliable design make it ideally suited for years of service.

Environmentally safe

Utilizing a high quality fluid injection pump enables you to precisely provide what your crop needs while reducing the environmental impact. With Agri-Inject equipment, there are other benefits of reduced drift and reduced labor and energy costs. Agri-Inject also offers containment options to provide even further assurance of environmental safety.

Economical to operate

Lower operating costs at high volumes make the mRoy A/P and B System Pumps especially effective for applying fertilizer, chemicals, and other concentrates through high acreage pivot irrigation systems.

Future of precision agriculture

Today we're on the doorstep of dynamic growth of precision farming within the global agricultural industry. Agri-Inject products are perfectly in sync with precision agriculture. They are the cost effective way to apply precise amounts of fertilizer and crop protection products at precisely the right times during the growing season. That's a sound "precision strategy" for improving yields and ensuring crop health for many years to come.

Where to buy

Agri-Inject products are distributed globally through an authorized dealer network. Each dealer has a solid reputation for responsive service and technical support. When you're irrigating, you can't afford to wait for answers. You'll find the support you need from Agri-Inject is just around the corner.

Double Duty Irrigation
Water is just one of the liquids your irrigation system can apply.

- In sync with your precision agriculture**
Apply at the right time, right place and at the right rate to ensure proper crop health.
- Simple and easy to calibrate**
Be ready to inject within five minutes and accurately apply.
- Uniform coverage**
No skips, no skip rows, no need to shut down the pivot.
- Timely**
Less expensive and you will never again wait for a custom applicator.
- Cost Savings**
One time investment pays you back application after application, field after field, season after season.

AUTHORIZED AGRI-INJECT DEALER

► **Chemigation Injection Systems**
The safe, effective, economical way to treat your crops.

"We have around 220 injection systems in place with our customers throughout the upper Columbia basin. They're mostly used for fertigation, but some are also used for chemigation in crops that include potatoes, wheat, mint and corn. Those systems include a mix of Agri-Inject units and a competitive brand. However, since we furnish the customer with the injection unit as part of our services, we've been trying to convert 10 or 15 units per year over to Agri-Inject. They're much easier to calibrate and you don't have to shut down the system to calibrate the micrometer with Agri-Inject. We have a few 30 gallon-per-hour units on the job, but most of them are 55s and 110s. We certainly can't afford to upgrade all of the units at once, but we definitely prefer the Agri-Inject models when we do change them over. They're just easier to use."

▶ Chemigation Injection Systems

Turnkey system that is ready for immediate chemigation

Lower costs... Higher yields... Timely applications... Time savings. That's the winning formula chemigation delivers to growers across the nation and around the world.

Designed for applying fertilizer, herbicides, insecticides, fungicides and other liquid products to a wide range of crops, an Agri-Inject® chemigation injection system can be fitted to most center pivot, linear sprinkler, drip and solid set irrigation systems. Choose from a wide variety of models designed to fit every application and every farm. Standard Chemigation Systems offer capacities of 70, 110 and 200 gallons, while large capacity systems feature tanks up to 600 gallons.

Key Product Features

▶ Features single or dual configuration, motor starter protection preset to FLA of each motor. One switch controls the Agitator motor and the other controls the Pump.

▶ A dedicated Agitation Motor ensures complete mix of chemical prior to injection into the irrigation system. Our large positive lock tank lid provides convenience when refilling the system.

▶ The Calibration Tube is constructed of impact and chemical resistant, UV stable material. The tube features precise, easy-to-read markings in ounce and milliliter units.

▶ The patented Ultra Mister Mist'r® has a four-way spray that effectively atomizes the inject product immediately for even distribution throughout the irrigation water flow.

▶ Each system comes standard with mRoy or MacRoy Pumps (depending on required gallon per hour rates), the most accurate, reliable pump available.

70-Gallon Unit

110-Gallon Unit

200-Gallon Unit

▶ Containment Chemigation Injection Systems

60-Gallon Unit
(Lid not shown)

Used for: Pre-emergent herbicides, high rate insecticides, fungicides.

Tank Capacities: 60- and 90-gallon tanks available in containment systems. All are engineered to fully mix chemicals and completely drain.

- ▶ Easily fitted to most center pivot, linear sprinkler, drip and solid set irrigation systems
- ▶ Containment units provide added environmental safety, ideal for avoiding spills when using expensive chemicals
- ▶ Powerful pump and agitation system for high performance and long life
- ▶ Agitation is standard on all sizes
- ▶ Available in three phase, single phase and 12-volt DC and most international electrical configurations
